PROSTHETIC & ORTHOTIC

Materials by Design

6th Edition

Ordering information

All of our customers are very important to us, so we try our best to despatch all orders received by 1.30pm the same day.

How to place an order:

When placing an order please provide the following information:

- An order number
- Product codes, descriptions and sizes
- Invoice and delivery addresses

We accept orders in the following ways:

- Telephone: +44 (0) 116 2785440
- Facsimile: +44 (0) 116 2780227
- Email: info@limbtex.com
- Post: LimbTex Ltd, Unit 1 & 2, Elizabeth Business Park, Tigers Close, South Wigston, Leicestershire, LE18 4AE United Kingdom

Please call +44 (0) 116 2785440 for our current delivery charges

Materials manufactured or ordered to customer requirements:

We are able to offer materials to your specification, please call our customer services team for advice.

Delivery Satisfaction:

Please notify our customer service team of any incorrect or damaged orders within 7 days. After 7 days LimbTex Ltd reserve the right not to accept responsibility for any claims.

Return of Goods:

All materials may be returned within 30 days for a credit less 20% re-stocking charge. All materials received must be in clean, unused condition. Materials manufactured at your request are non-returnable.

Pricing:

Pricing is available separately on request and subject to VAT at the current rate.

Payment:

Our Payment terms are strictly 30 days from date of invoice, Cheques should be made payable to LimbTex Ltd.

Specification:

LimbTex Ltd reserves the right to alter specification or withdraw materials from sale.

Ownership of Goods:

All goods supplied remain the property of LimbTex Ltd until paid for in full.

CASTING SOCKS

BALLET TIGHTS

Casting Textiles

Casting socks are 100% Cotton and Ballet tights are Nylon and Lycra®.

Use: Both are used for general casting. Other sizes can be made to your requirements.

Product Code	Description	Quantity
CSR	Cast Sock Regular Size 12 x 51cm	Pack of 10
CSL	Cast Sock Long Size 12 x 71cm	Pack of 10
CTWL	Ballet Casting Tights Large	1 Pair
CTWXL	Ballet Casting Tights X Large	1 Pair

CHINAGRAPH PENCILS

INDELIBLE PENCILS

Marking Pencils

Use: Indelible pencil for marking wet plaster casts / shell casts, Chinagraph pencils for marking hard surfaces.

Product Code	Colour/Type	Quantity
PENI	Blue Indelible Pencil	1
PENI/12	Blue Indelible Pencil	Box of 12
PENCBLU	Blue Chinagraph Pencil	1
PENCBLU/12	Blue Chinagraph Pencil	Box of 12
PENCWHT	White Chinagraph Pencil	1
PENCWHT/12	White Chinagraph Pencil	Box of 12
PENC	Black Chinagraph Pencil	1
PENC/12	Black Chinagraph Pencil	Box of 12
PENCR	Red Chinagraph Pencil	1
PENCR/12	Red Chinagraph Pencil	Box of 12
PENCY	Yellow Chinagraph Pencil	1
PENCY/12	Yellow Chinagraph Pencil	Box of 12

Clingfilm

Use: General masking for filling/protection

Product Code	Size	Quantity
CFILM	30cm x 100m	1 Roll
CFILM/S	10cm x 150m	1 Roll

Synthetic Casting Tapes

Use: For reinforcing temporary alignments of sockets to adaptors/wood blocks/foam build-ups etc.

Product Code	Colour	Width	Quantity
LTCT3BLU	Blue	7.5cm	1 Roll
LTCT3BLU/BOX	Blue	7.5cm	Box/10
LTCT3WHT	White	7.5cm	1 Roll
LTCT3WHT/BOX	White	7.5cm	Box/10
LTCT3BLK	Black	7.5cm	1 Roll
LTCT3BLK/BOX	Black	7.5cm	Box/10
LTCT4BLK	Black	10cm	1 Roll
LTCT4BLK/BOX	Black	10cm	Box/10
LTCT4WHT	White	10cm	1 Roll
LTCT4WHT/BOX	White	10cm	Box/10

Plaster Of Paris Bandage

This Plaster of Paris bandage is a gypsum based material impregnated into 100% cotton leno-weave gauze. It has a rich & creamy texture providing a smooth finish to the cast and is fast setting. The bandage offers excellent moulding characteristics and minimal plaster loss.

Use: For casting patients or for general workshop use

Product Code	Description	Quantity
PB/7.5	Plaster Bandage, 7.5cm wide x 2.7m Long	Box of 24
PB/10	Plaster Bandage, 10cm wide x 2.7m Long	Box of 12
PB/15	Plaster Bandage, 15cm wide x 2.7m Long	Box of 12
PB/20	Plaster Bandage, 20cm wide x 2.7m Long	Box of 12

Plaster Release Agent

Use: Coating inside a plaster cast before pouring plaster to make the positive mould to prevent sticking.

Product Code	Quantity
PRA/5	5Ltr

Wire Brush

Use: General cleaning of plaster tools.

Product Code	Quantity
WIREB	1

Heavy Duty Rubber Bucket

Product Code	Description	Quantity
RBUCKET	Rubber Bucket, 3 gallon capacity	1

Plaster Cast Tools

Product Code	Description	Quantity
PCT	Plaster Cast Tools, 5 Assorted shapes	Pack of 5 assorted

Couch Paper Roll

Product Code	Description	Quantity
PROLL	2 Ply Paper Roll, 50cm x 50m	1 Roll

Elastic Compression Stockinette for Sprains Etc

Use: For Sprains, reinforcing foams etc.

Product Code	Description	Quantity
ESD7.5	Elastic Stockinette Size D, 7.5cm x 10m	1 Roll
ESE8.75	Elastic Stockinette Size E, 8.75cm x 10m	1 Roll
ESF10	Elastic Stockinette Size F, 10cm x 10m	1 Roll
ESJ17	Elastic Stockinette Size J, 17.5cm x 10m	1 Roll
ESL32	Elastic Stockinette Size L, 32.5cm x 10m	1 Roll

Plaster Bandage Scissors

Very strong with protruding round end for cutting next to the skin made from Stainless Steel.

Use: General cutting of bandages etc.

Product Code	Description	Quantity
SCISSORSBAND	Bandage Scissors, 19cm Long	1 Pair

Chromatic Alginate

Changes colour when it begins to set to allow accurate timing. Wrap or fill immediately after setting.

Use: For copying sockets or replication of existing limbs.

Product Code	Weight	Quantity
ALGINATE	450g	1 Bag
ALGINATE/1	1KG	1 Bag

Vermiculite

Use: Used in plaster casts to reduce the weight.

Product Code	Description	Quantity
VLSF	Vermiculite Super Fine, 100 Ltr	1 Bag

LimbCopy Silicone - This is a 2 part 60 Shore silicone

Excellent detail with no shrinkage and no release agent required.

Use: Duplication of prosthetic sockets.

Product Code	Description	Quantity
LCSIL	Limb Copy Silicone 2kg kit = 1kg Sil, 1kg Hardener	2 Kg Kit
LCSIL/5	Limb Copy Silicone 5kg	5Kg
LCSILH/5	Limb Copy Silicone Hardener 5kg	5Kg

LimbFoam 200/300/450/700 & Hardener

These foams are blended specifically for LimbTex and are designed for different uses within prosthetic, orthotic and orthopaedic footwear workshops. When mixed, these foams become rigid but vary in strength depending on the grade selected.

Some grades can be used to static align components and some to align components for dynamic trials, others for cosmetic shaping and shoe lasts.

Once hardened the foam is lightweight and rigid. All grades can be shaped using sand papers and hand tools as well as machines. If using in a lamination, the foam can be sealed with LimbCryl Sealing resin before laminating over to prevent air bubbles.

Available in four densities: 200, 300, 450 and 700

Mixing ratio is 1:1 by weight not volume (using LimbTex mixing cups will give accurate results) although it is possible for the foam to cure, if measured incorrectly it will not give you the required density or strength.

LimbTex pigment pastes can be used to colour the foams if required.

If using LimbFoam for shoe lasts, it is recommended to use the LimbFoam release agent to aid stripping the cast.

Tip:

When measuring out the LimbFoam component A, mix it well before adding the LimbFoam Hardener component B as this will give a more even cell structure and greater expansion. Mix the two components until they have gone dark in colour, through to light again and the foam begins to rise.

LimbFoam 200 Rigid Expanding Foam

Use: For light to average weight bearing prostheses, it will expand to approximately 6.5 times its original volume.

Requires LimbFoam Hardener.

Product Code	Quantity
LF200/0.9	0.9Kg
LF200/2.3	2.3Kg
LF200/4.6	4.6Kg

LimbFoam 300 Rigid Expanding Foam

Use: For heavy weight-bearing prostheses, it will expand to approximately 4.8 times its original volume.

Requires LimbFoam Hardener.

Product Code	Quantity
LF300/0.9	0.9Kg
LF300/2.3	2.3Kg
LF300/4.6	4.6Kg

LimbFoam 450 Rigid Expanding Foam

Use: For very heavy weight-bearing prostheses and shoe lasts, it will expand to approximately 2.2 times its original volume.

Requires LimbFoam Hardener.

Product Code	Quantity
LF450/0.9	0.9Kg
LF450/2.3	2.3Kg
LF450/4.6	4.6Kg

LimbFoam 700 Rigid Expanding Foam

Use: For extremely heavy weight-bearing prostheses and shoe lasts, it will expand to approximately 1.7 times its original volume. Requires LimbFoam Hardener.

Product Code	Quantity
LF700/0.9	0.9Kg
LF700/2.3	2.3Kg
LF700/4.6	4.6Kg

LimbFoam Hardener for Rigid Foams

Use: For hardening LimbFoam 200/300/450/700 grades.

Product Code	Quantity
LFH/0.9	0.9Kg
LFH/2.3	2.3Kg
LFH/4.6	4.6Kg

LimbFoam Release Agent for Rigid Foams

Use: For releasing LimbFoam 200/300/450/700 grades from plaster casts. This should ideally be left to dry and 2 coats applied.

Product Code	Quantity
LFRA	5Ltr

LimbPlas Shuttering

Use: Wrapping sockets etc to allow for a LimbFoam Expanding foam build up - Foam does not stick to this. Also used to wrap around trans-tibial limbs to form a temporary cosmesis.

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS1.5P	1.5mm	1220 x 488 mm	1 Sheet
LIMBPLAS1P	1mm	1000 x 500 mm	1 Sheet

LimbCryl Acrylic Resins

These resins are blended specifically for the orthopaedic industry. They are methylmethacrylate based, transparent and require a hardening powder to cure them. They are lightweight and have excellent strength. These resins are less viscous than other resins on the market, which can give a much better “wet out” and reduces the chance of de-lamination whilst enhancing the strength of the lamination.

The range consists of Lamination resin (80/20), Carbon resin, Sealing resin and Flexible resin, all of which can be mixed to give tailored results for your specific requirements. The cured resins are thermoplastic, so can be adjusted using a heat gun and reshaped, they are also non-irritating. All LimbCryl resins mixing ratio is 2%-3% (2g-3g) hardening powder to 100g of resin depending on room temperature.

Tips:

When laminating with a high content of carbon fibre, always use Carbon resin as this will give you a lighter and stronger lamination as it will penetrate the fibres more efficiently. Turn PVA bags inside out to give a shine to the surface of the lamination.

LimbCryl 80:20 Lamination Resin

Use: For general, rigid laminations using a combination of lamination materials.

Product Code	Quantity
LCLR/0.9	0.9Kg
LCLR/2.3	2.3Kg
LCLR/4.6	4.6Kg

LimbCryl Carbon Resin

Use: For rigid laminations when using a high content of carbon fibre material.

Product Code	Quantity
LCCR/0.9	0.9Kg
LCCR/2.3	2.3Kg
LCCR/4.6	4.6Kg

LimbCryl Flexible Resin

Use: For localised flexible laminations when certain areas of a lamination need to be more flexible than others.

Product Code	Quantity
LCFR/0.9	0.9Kg
LCFR/2.3	2.3Kg
LCFR/4.6	4.6Kg

LimbCryl Sealing Resin

Use: For attaching components for laminating over, sealing LimbFoam expanding foam and for bonding to wood etc.

Product Code	Quantity
LCSR/0.9	0.9Kg
LCSR/2.3	2.3Kg
LCSR/4.6	4.6Kg

LimbCryl Sealing Resin Gel

Use: For attaching components for laminating over, sealing LimbFoam expanding foam and for bonding it together etc. This is a more viscous Sealing resin for extra control during use.

Product Code	Quantity
LCRYLGEL	750g

LimbCryl “Tech” Resins

These resins are blended specifically for the orthopaedic industry and allow more working time than our standard range. This makes them ideal for very large and complicated objects that do sometimes require more time. They are methyl-methacrylate based, transparent and require hardening powder to cure them. They are lightweight and have excellent strength.

The range consists of Lamination Resin (80/20 TECH) and Carbon Resin (C-TECH) both of which can be mixed to give tailored results for your specific requirements.

The cured resins are thermoplastic, so can be adjusted using a heat gun and reshaped, they are also non-irritating. Both LimbCryl “TECH” resins can be mixed with between 2 and 3% (2-3g) hardening powder to 100g of resin depending on the room temperature and time required for usage.

Tip:

Better for laminating over PU carvings as has a longer working time

LimbCryl 80:20 TECH Lamination Resin

Use: For general, rigid lamination using a combination of lamination materials where more working time is required.

Product Code	Quantity
LCLR/0.9TECH	0.9Kg
LCLR/2.3TECH	2.3Kg
LCLR/4.6TECH	4.6Kg

LimbCryl C-TECH Lamination Resin

Use: For general, rigid laminations using a high content of carbon fibre-material and also where more working time is required.

Product Code	Quantity
LCCR/0.9TECH	0.9Kg
LCCR/2.3TECH	2.3Kg
LCCR/4.6TECH	4.6Kg

Polyester Resins

This resin is available in rigid and flexible forms. It is easy to use requiring only LCHP hardening powder to cure it. This resin is not thermoplastic, so cannot be adjusted, If heat adjustments may be required, use our LimbCryl range of resins. Our pigment pastes for acrylic resins, putties and foams can also be used with our Polyester resin.

Rigid resin pot life is 15 min, Gel time 30 min, Hardened time 40 min.

Flexible resin pot life 30 min, Gel time 50 min, Hardened time 80 min.

The above are cured using between 2-3% LCHP hardening powder depending on room temperature.

Polyester Resin

Rigid Use: For general rigid laminations using a combination of materials.

Flexible Use: For general flexible laminations using a combination of materials.

Product Code	Quantity
POLYEST/5	5Kg
POLYESTFLEX/5	5Kg

LimbCryl Hardening Powder

Use: For curing our Acrylic resins (2-3%), Polyester resins (2-3%) and putties (4-6%).

Product Code	Quantity
LCHP/150	150g
LCHP/500	500g

Digital Scales

Use: It is very important to use the correct amount of hardening powders and pigments when using resins. For this reason, we recommend using accurate scales which offer increments from 0.01g. These scales will also weigh up to 500g in total weight.

Product Code	Description	Qty
DSCALES	Digital scales 500g capacity	1 Set

Pigment Pastes for our Acrylic Resins, Putties & Foams

Use: For colouring LimbCryl resins, putties and foams.

Product Code	Colour	Qty
PPBLK	Black	250g
PPBLU	Blue	250g
PPBRN	Dark Brown	250g
PPC	Caucasian	250g
PPC/1	Caucasian	1Kg
PPCLIGHT	Caucasian Light	250g
PPCLIGHT/1	Caucasian Light	1Kg
PPGRN	Green	250g
PPR	Red	250g
PPST	Suntan	250g
PPW	White	250g
PPY	Yellow	250g

N.B. Colour swatches are shown as a guide only.

ORTHOPOXY® Resin

BPA FREE

BPA is an endocrine disruptor that can interfere with our hormones, causing harmful effects even at very low doses: infertility, cancer, diabetes, obesity, etc. Compared to acrylic resin, there is less danger and it uses less oil to produce it.

Orthopoxy® is a patented new generation resin system for the manufacture of Prosthetic and Orthotic devices. It consists of Biosourced epoxy/acrylic resins which are Bisphenol A (BPA) - free. These resins have been designed to impregnate our Basalt and Flax fibres but will also work with traditional fibres.

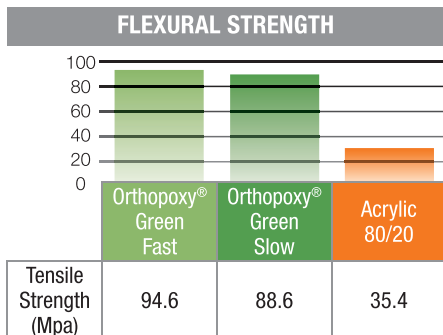

Orthopoxy® Fast: Designed with a fast working time and for the manufacture of Prosthetic Sockets. **Working time = 35 mins.**

Orthopoxy® Slow: Designed with a slow working time and for manufacture of Orthotic devices or large Prosthetic devices. **Working time = 90 mins**

For the optimal mechanical properties once the resin is set, the device must be post cured at 100°C for 1hr.

There are many benefits for the user of this resin system:

- Structural
- More rigid
- Less fragile
- Can be slightly heat adjusted
- Low, non-aggressive odour
- Less resin & materials used when laminating
- Non-flammable
- Non-carcinogenic
- Contains up to 36 % bio sourced components
- Lower level PPE required (Nitrile Gloves)

ORTHOPOXY® VS ACRYLIC 80/20

	Orthopoxy® Fast	Orthopoxy® Slow	Acrylic 80/20
Glass Transition Temperature °C	73	68	70
Final Hardness ShD	86	85	85

Code	Description FAST	Working Time	Quantity
EPOX-FD03	Orthopoxy® Green Fast Epoxy Hardener 2 x 1Kg	35 Mins	2Kg
EPOX-FR03	Orthopoxy® Green Fast Epoxy Resin 5Kg	35 Mins	5Kg
Code	Description SLOW	Working Time	Quantity
EPOX-SD03	Orthopoxy® Green Slow Epoxy Hardener 2 x 1Kg	90 Mins	2Kg
EPOX-SR03	Orthopoxy® Green Slow Epoxy Resin 5Kg	90 Mins	5Kg

Orthopoxy® The tensile and flexural strengths of both the fast and slow versions exceed the traditional Acrylic 80/20 by over double and this is before reinforcement materials are introduced into the matrix.

LimbSil Silicones

The silicones we supply are platinum curing which ensures they are top quality, have better mechanical properties and are "skin safe".

LimbSil 20

This is totally unique to the industry as the shore harness and working viscosity can be altered by the technician without changing the mechanical properties. This can be achieved with additives during the mixing stage which will not alter the mechanical properties of the silicone (provided guidelines are adhered to).

LSIL20 is white and can, if required be coloured using our range of silicone pigments. This silicone resin is particularly suited to manufacturing custom silicone liners and sleeves with the addition of textiles it has a low viscosity and will "wet out" the fibres well. It can also be thinned further and if required have it's shore reduced. It can also be used for many other applications such as insoles, distal end bearing pads etc.

- Gel Time:** 10 minutes
- Demoulding Time:** 35 minutes
- Complete hardening point:** 60 minutes
- Mixing ratio:** 1/1

LSIL20THIN

This is a non hazardous thinner designed only for LimbSil20 which can be used upto a maximum of 5% (this also includes the % of shore reducer used, so the total of both must not exceed 5%) without changing the mechanical properties.

LSIL20SR

This is a non hazardous shore reducer designed only for LimbSil20 which can be used upto a maximum of 5% (this also includes the % of thinner used, so the total of both must not exceed 5%) without changing the mechanical properties.

LSILC/TR5

This is transparent and only available in 400ml cartridges which can, if required be dispensed into mixing cups to add pigment. This product is designed to manufacture silicone liners with no textile on the inside and to be finished with a Lycra cover glued to the outer surface to aid donning and durability.

- Gel Time:** 10 minutes
- Demoulding Time:** 35 minutes
- Complete hardening point:** 60 minutes
- Mixing ratio:** 1/1

Product Code	Description	Quantity
LSIL20	LimbSil 20-24 Shore A Kit (includes 500g of resin and 500g of Hardener)	1 Kg Kit
LSIL20SR	LimbSil20 Shore reducer	50g
LSIL20THIN	LimbSil20 Thinner	50g
LSILC/TR5	LimbSil 5-8 Shore Dual Silicone Cartridge 400ml	400g
LSIL/GUN	Applicator Gun for 400ml Twin Cartridges	1

Custom Liner Accessories

SIL/A

This is Acetoxy silicone is a high modulus, fast curing silicone - tack free in 1 hour. This silicone should not be in contact with the skin but is ideal for gluing the fabric covers to the outside of custom fabricated silicone liners.

SIL/A/THIN

This is a thinner for our SIL/A but can also be used removing silicones from tools etc and should not be used to thin our other silicones.

Lycra coverings can be found on pages 29, 30 and 31.

Distal Attachments

SIL/A/GUN

SIL/A

SIL/A/THIN

Product Code	Description	Quantity
DA40	40MM Ø Distal Attachment For Making A Custom Silicone Pin Liner	1
DA50	50MM Ø Distal Attachment For Making A Custom Silicone Pin Liner	1
DA60	60MM Ø Distal Attachment For Making A Custom Silicone Pin Liner	1
SIL/A	Silicone Adhesive for sticking fabric to silicone, 310ml Tube	1
SIL/A/THIN	Silicone Adhesive Thinner, 1 Ltr	1
SIL/A/GUN	Dispensing Gun for 310ml Tubes	1

Silicone Putty - 20 Shore

Uses: Finger and toe separators. Just knead together with hands for 20 seconds. Cures in 5 minutes.

Product Code	Description	Quantity
SILP/0.5	Silicone Putty	500 g
SILP/1	Silicone Putty	1 Kg

LimbSil Pigment Pastes

Uses: For colouring LimbSil silicones.

N.B. Colour swatches are shown as a guide only.

Stockinettes

Perlon Stockinette “Nylon”

Use: Commonly used as a first layer and last layer of a standard lamination as it gives a finer finish

Product Code	Width	Approx Roll Length	Quantity
PERLON6	6cm	55m	1Kg Roll
PERLON8	8cm	42m	1Kg Roll
PERLON10	10cm	37m	1Kg Roll
PERLON12	12cm	33m	1Kg Roll
PERLON15	15cm	27m	1Kg Roll
PERLON20	20cm	20m	1Kg Roll
PERLON25	25cm	15.5m	1Kg Roll
PERLON30	30cm	12m	1Kg Roll

Polyester Stockinette

Use: Commonly used as a first layer and last layer of a standard lamination as it gives a smooth finish. Polyester is approximately 20% heavier than Nylon and doesn't absorb liquids as well but it is hard to tell the difference and the cost saving is approximately 35%.

Product Code	Width	Approx Roll Length	Quantity
POLYESTER6	6cm	44m	1Kg Roll
POLYESTER8	8cm	33.5m	1Kg Roll
POLYESTER10	10cm	30m	1Kg Roll
POLYESTER12	12cm	26.5m	1Kg Roll
POLYESTER15	15cm	21.5m	1Kg Roll
POLYESTER20	20cm	16m	1Kg Roll

Stretch Nylon Stockinette

Use: Used as a first layer and outer layer of a standard lamination as it gives a uniform finish.

Product Code	Width	Approx Roll Length	Quantity
NYLON9	9cm	75m	1Kg Roll
NYLON12	12cm	41m	1Kg Roll
NYLON15	15cm	32m	1Kg Roll
NYLON20	20cm	24m	1Kg Roll

Caucasian Nylon Stockinette

Use: Commonly used as a cosmetic covering, but also use as a first and outer layer on a lamination to add colour without pigments.

N.B Custom colours can be made, please contact LimbTex (minimum order would apply).

Product Code	Width	Approx Roll Length	Quantity
SKINNYLON6	6cm	86m	1Kg Roll
SKINNYLON9	9cm	65m	1Kg Roll
SKINNYLON12	12cm	41m	1Kg Roll
SKINNYLON15	15cm	32m	1Kg Roll
SKINNYLON20	20cm	24m	1Kg Roll

Black Nylon Stockinette

Use: Ideal for making pure black sockets or can be used to blacken under a thin layer of carbon fibre.

Product Code	Width	Approx Roll Length	Quantity
NYLON6BLK	6cm	86m	1Kg Roll
NYLON9BLK	9cm	65m	1Kg Roll
NYLON12BLK	12cm	41m	1Kg Roll
NYLON15BLK	15cm	32m	1Kg Roll
NYLON20BLK	20cm	24m	1Kg Roll

Nylass Stockinette

Use: Commonly used in the centre of a lamination layup, this material is made with 33% Perlon and 66% glass fibre to give strength and stiffness.

Product Code	Width	Approx Roll Length	Quantity
NYGLASS6	6cm	52m	1Kg Roll
NYGLASS8	8cm	36m	1Kg Roll
NYGLASS10	10cm	32m	1Kg Roll
NYGLASS12	12cm	26m	1Kg Roll
NYGLASS15	15cm	23m	1Kg Roll
NYGLASS20	20cm	18m	1Kg Roll
NYGLASS25	25cm	15m	1Kg Roll
NYGLASS30	30cm	11m	1Kg Roll

Polyglass Stockinette

Use: Commonly used in the centre of a lamination layup, this material is made with 40% Polyester and 60% glass fibre to give strength and stiffness. Polyester is 20% heavier than Nylon and doesn't absorb liquids as well but it is hard to tell the difference and it will offer a cost saving.

Product Code	Width	Approx Roll Length	Quantity
POLYGLASS6	6cm	48.5m	1Kg Roll
POLYGLASS8	8cm	33.5m	1Kg Roll
POLYGLASS10	10cm	30m	1Kg Roll
POLYGLASS12	12cm	24m	1Kg Roll
POLYGLASS15	15cm	21.5m	1Kg Roll
POLYGLASS20	20cm	16.5m	1Kg Roll

Stretch Nylass Stockinette

Use: Used inside a lamination, this material is made 33% Nylon and 66% glass fibre.

Product Code	Width	Approx Roll Length	Quantity
SNYGLASS9	9cm	33m	1Kg Roll
SNYGLASS12	12cm	25m	1Kg Roll
SNYGLASS15	15cm	21m	1Kg Roll
SNYGLASS20	20cm	16m	1Kg Roll

Natural Cotton Stockinette

Use: Ideal for final layer over eco materials to allow for pigmenting.

Product Code	Width	Approximate Roll Length	Quantity
NCOTTON6	6cm	55m	1Kg Roll
NCOTTON8	8cm	42m	1Kg Roll
NCOTTON10	10cm	37m	1Kg Roll
NCOTTON12	12cm	33m	1Kg Roll
NCOTTON15	15cm	27m	1Kg Roll
NCOTTON20	20cm	20m	1Kg Roll

Glass Fibre Stockinette

Use: This is 2 way stretch and is commonly used for thin walled but strong lightweight laminates, made from 100% glass fibre.

Product Code	Width	Approximate Roll Length	Quantity
GFS6	6cm	28.5m	1Kg Roll
GFS8	8cm	17m	1Kg Roll
GFS10	10cm	15.5m	1Kg Roll
GFS12	12cm	12.5m	1Kg Roll
GFS15	15cm	9m	1Kg Roll
GFS20	20cm	7m	1Kg Roll
GFS25	25cm	5m	1Kg Roll

Braids

LimbTex Glass Fibre Braided Sleeves

Use: Commonly used for thin walled but strong lightweight laminates, made from 100% glass fibre. The orientation of the fibres make it ideal for the directional forces in a prosthetic socket.

Other sizes, lengths, weights available on request.

Product Code	Width	Approximate Roll Length	Quantity
GB6	6cm	12.5m	1Kg Roll
GB8	8cm	8m	1Kg Roll
GB10	10cm	7m	1Kg Roll

Carbon Fibre Braided Sleeves

Use: Commonly used for very thin walled but very rigid lightweight sockets. The orientation of the fibres makes it ideal for the forces in a prosthetic socket. We offer 6 and 12K braids, 6K being half the thickness and weight of the 12K. Typically 6K is easier to tie into component grooves and 12K covers better.

Other sizes, lengths and weights available on request.

Carbon/Glass Fibre Tubular Braid

Use: Commonly used for very thin walled but very strong lightweight laminates, made from 50% carbon fibre and 50% glass fibre. The orientation of the fibres make it ideal for the forces in a prosthetic socket. Lengths are measured when the fibres are at 45° (not when stretched).

Other sizes, lengths, weights available on request.

Product Code	Width	Approximate Roll Length	Quantity
CGB/BK	8cm	11m	1Kg Roll
CGB/AK	10cm	10m	1Kg Roll

Cloth Sheet

Carbon Fibre Cloth

Use: Commonly used for localised reinforcement and stiffening, made with 3K carbon fibre in a 2/2 twill construction giving superior draping and weighing 200g m².

Product Code	Width	Length	Quantity
CFC	1m	1m	1m ²
CFC/10	1m	10m	10m ²
CFC/20	1m	20m	20m ²
CFC/50	1m	50m	50m ²

Other weights, weaves and lengths available on request

Glass Fibre Cloth

Use: Commonly used for localised reinforcement, made with glass fibre in a 2/2 twill construction for superior draping, weighing 280g m².

Product Code	Width	Length	Quantity
GFC	1m	1m	1m ²
GFC/10	1m	10m	10m ²
GFC/20	1m	20m	20m ²
GFC/50	1m	50m	50m ²

Glass Fibre Matting (Biegelow)

Use: Commonly used for localised reinforcement and to really stiffen an area, made with glass fibre, weighing 600g m². Edges can be thinned to give a feathered edge effect by pulling the fibres apart.

Product Code	Width	Length	Quantity
GFM	1m	1m	1m ²
GFM10	1m	10m	10m ² Roll
GFM20	1m	20m	20m ² Roll
GFM50	1m	50m	50m ² Roll

Dacron Felt

Use: Commonly used as a first layer in a lamination to give a very smooth glass like finish, which can be sanded and polished if adjustment is needed. Also used to line corsets etc. to reduce volume. Made from 3mm thick polyester, weighing 280g m².

Product Code	Width	Length	Quantity
DACRON	1m	1m	1m ²
DACRON10	1m	10m	10m ² Roll
DACRON20	1m	20m	20m ² Roll
DACRON50	1m	50m	50m ² Roll

Unidirectional Tapes

Carbon Fibre Unidirectional Tape

Use: Commonly used for localised reinforcement and to accurately stiffen areas. Made in a unidirectional construction, using 12K carbon fibre for the heavy weight and 6K carbon fibre for the light weight.

Product Code	Width	Weight	Roll Length	Quantity
CFT25	25mm	Heavy 12 K	50m	1 Roll
CFT38	38mm	Heavy 12 K	50m	1 Roll

CFT75L	75mm	Light 6 K	50m	1 Roll
CFT100	100mm	Heavy 12 K	50m	1 Roll

earth

COLLECTION

composite materials

LimbTex

and our earth collection

Our **earth collection** has been especially developed for the Prosthetic and Orthotic industries to truly offer usable, natural and bio-based alternatives without compromising on quality or strength. Traditionally, laminated prosthetic and orthotic devices are manufactured from many different reinforcing materials which mostly have an acrylic matrix (methyl methacrylate based). Although these resins are good they have many disadvantages i.e. low structural strength, strong solvent odour, hazardous, flammable and irritating. The hardener (organic peroxide), is a combustive and produces CMR products (carcinogenic, mutagenic and reproductive).

Our **earth collection** of eco based materials are less hazardous than those traditionally used, better for the environment, easier and cleaner to work with as well as being cost effective. The collection consists of natural sourced composite materials which are sustainable and have low environmental impact. The natural fibres provide excellent mechanical properties and are comparable with currently used fibres but with the added benefits of less health hazards, less irritating, nontoxic and non-carcinogenic.

We have been developing this range and have had extensive testing carried out at the University of Leicester in the UK and by Intetek UK who are an independent test house. Full test results are available in our separate earth collection brochure. Please contact us if you require a copy of this.

earth collection materials

Flax Fibre Braid & Tapes

Flax is a natural fibre that is revolutionizing the world of composites materials. It offers great natural shock absorbing properties never yet attained by any other conventional fibres such as Carbon or Glass fibre. Our specially developed Flax materials besides being environmentally friendly and 100% renewable, make it possible to produce a light and highly resistant composite device.

- No health hazards: non-irritating, non-allergic, VOC Free.
- Good mechanical properties: similar to Glass fibre.
- Lighter weight compared to other composite offerings.
- Great shock-absorbing properties: filters vibration and impact.
- Natural resource, renewable and biodegradable.
- Very low environmental impact.

Available in Braids and Unidirectional Tape.

Code	Description	Weight g/m	Quantity
FFB130/5	130mm Ø +/- 45° Flax Fibre Braid	130	5m Pack
FFB150/5	150mm Ø +/- 45° Flax Fibre Braid	203	5m Pack

Code	Description	Weight g/m	
FFT50	50mm Wide Uni-Directional Flax Fibre Tape	15.65	50m Roll

Flax & Orthopoxy® has proved to exceed traditional stockinette materials and Carbon & Acrylic samples for ultimate flexural and tensile strengths.

Flax & Orthopoxy® show improved comfort due to the natural shock absorbance and vibration damping never before obtained from traditional composites, Flax also provides greater heat regulation properties that are not obtained with traditional composites.

Basalt Fibre Braid, Tape And Cloth

LimbTex Basalt is made from superior Basalt fibres derived from volcanic rock making it an eco-friendly and natural material. Specially developed for the industry this material can be used for complete sockets or local reinforcement. By offering a similar surface finish to Carbon fibre it could also be used for a decorative finish.

- Safer and cleaner to use than other composites.
- Little to no skin irritation from dust or loose fibres.
- Mechanical properties between, Carbon and Glass fibre makes it a useful and interesting alternative.
- Easier and cleaner to machine than Glass, Carbon and Aramid fibres.
- Compatible with all resins but performs best with Orthopoxy®.
- Non-toxic and non-carcinogenic.
- Lower Rated PPE required to Carbon Fibre (P1 Dust Mask not P3).
- Excellent strength and durability as well as being lightweight.

Available in Braids, Unidirectional Tape and 2/2 Twill Cloth

Code	Description	Weight g/m	Quantity
BFB130/5	130mm Ø +/- 45° Basalt Fibre Braid	244	5m Pack

Code	Description	Weight g/m	
BFC	Basalt Fibre Cloth 200g/m ² , 1270 x 790mm	211g	1 Sheet

Basalt Braids & Orthopoxy® require 3 times the amount of force to break under flexion compared to Carbon & Acrylic. It also required well over double the amount of force to break samples under tension. The UD flexural strength again proved to be superior over Carbon Acrylic.

Hybrid Flax & Basalt Fibre Braids & Tapes

In addition to the Flax and Basalt reinforcements the Flax & Basalt Hybrid range offers the benefits of both materials combined in one. This allows even more customisation possibilities for your device achieving rigidity and flexibility where you require it.

Code	Description	Weight g/m	Quantity
FBFB130/5	130mm Ø +/- 45° Flax and Basalt Fibre Braid	190	5m Pack
FBFB150/5	150mm Ø +/- 45° Flax and Basalt Fibre Braid	265	5m Pack
FBFB225/5	225mm Ø +/- 45° Flax and Basalt Fibre Braid	441	5m Pack
Code	Description	Weight g/m	
FBFT50	50mm Wide Flax and Basalt Fibre Tape	22.05	50m Roll

Available in Braids and Unidirectional Tape

Selection Guide

The chart below will enable the technician to accurately select an alternative “eco” material in replacement for the traditional materials with the knowledge that these have been tested to ATSM standards using our Orthopoxy® resin. (Testing information available on request).

The earth collection vs Traditional Composites

Traditional materials & Acrylic resin	=	earth collection materials & Orthopoxy® resin	Uses & Areas
Perlon (Single)	=	Natural Cotton (Single)	Finishing Layer, Pigmented Laminates.
Perlon (Double)	=	Flax Braid (Single)	Light, Structural Braid or Flax Finishing Layer.
Perlon (2 Double) + Nylglass (3 Double)	=	Flax Braid (2 Double)	Light, Structural Braid or Flax Finishing Layer.
Glass Fibre Braid	=	Flax Braid	Light, Structural Braid or Flax Finishing Layer.
Glass Fibre Matting	=	Hybrid Flax & Basalt UD Tapes	Damping and Structural Tape, filters vibration and shock, adds thickness and rigidity distally.
Glass and Carbon Fibre Braid	=	Hybrid Flax & Basalt Braid	Medium, Structural Braid or Hybrid Flax & Basalt Finishing Layer.
Carbon Fibre 12K Braid	=	Basalt Braids	Heavy, Structural Braid or Basalt Finishing Layer.
Carbon Fibre 12K UD Tapes	=	Basalt UD Tapes	Local Reinforcement Tapes, Over & under adaptors distally.
Carbon Fibre 2/2 Twill	=	Basalt 2/2 Twill	Local Reinforcement or Finishing Layer

Disclaimer:

LimbTex Ltd, provides all manufacturing and lay up recommendations in good faith as technical guidelines. It is the responsibility of the clinicians and technicians to ensure the lay-up of materials, amounts used and manufacturing process are of sound quality and have been prescribed in accordance to patient's weight, activity level and componentry. LimbTex Ltd bases all guidelines on research and development and can provide training and advice but cannot take responsibility for individual devices manufactured as LimbTex Ltd holds no patient data and cannot guarantee its customer's individual manufacturing quality and competencies.

Pigmenting

It is not possible to directly pigment the earth braids, but if this is required LimbTex natural cotton stockinette can be used on the inner and outer surfaces which will accept the pigments.

Available in Stockinettes

Code	Description	Description
NCOTTON6	6 cm Natural Cotton Stockinette	1 Kg Roll
NCOTTON8	8 cm Natural Cotton Stockinette	1 Kg Roll
NCOTTON10	10 cm Natural Cotton Stockinette	1 Kg Roll

The earth collection Starter Kit

Below are a selection of materials which have been put together to get you started with our “**earth collection**“. This kit contains enough materials for the manufacture of 4-5 Trans-tibial sockets, depending on build choices and finishes required.

THE KIT CONTAINS:

1.4Kg **Orthopoxy**® Resin Fast Kit

- 2.5m of Basalt130 Braid
- 2.5m of Flax130 Braid
- 2.5m of Basalt/Flax130 Braid
- 2m of Basalt UD Tape
- 2m of Flax UD Tape
- 2m of Flax and Basalt/Flax UD Tape
- ½ Sqm Basalt Cloth
- 2m 10cm Natural Cotton
- 1 x Non Abrasive Pads
- Laminating Roller
- Petroleum Jelly
- 3 x Wet and Dry Sheet

Code	Description	Description
ECOSTARTS	Eco Starter Kit	1 Kit

earth collection Training:

LimbTex can offer on or off site training for this new, clean and exciting range of materials.

TRAINING WOULD INCLUDE:

- Introduction to the materials and their development
- Mechanical testing and performance
- Materials selection and comparisons to traditional builds
- Hands on manufacture of a trans-tibial socket
- Curing and finishing process

Please contact the office to organise any of the above.

Email: info@limbtex.com
Tel: +44 (0) 116 2785440

Basalt Fibre & Lurex® Braids

This is a decorative structural material made from Basalt fibres braided with bright and shiny Lurex® film. It can be used to create both inside and outside socket finishes. The braids have been developed to give a consistent diamond pattern which keep their shine once laminated giving a pleasingly different look. It is recommended to use a backing layer of either Basalt quality braid or NYLONBLK to keep the Lurex® defined.

Code	Description	Weight g/m	Quantity
BFBSL130/5	130mm Ø +/- 45°Basalt Fibre & Lurex® Braid	185	5m Roll

Sparkle STOCKINETTES

This is our unique range of stockinettes made with Lurex® yarns for that "Sparkle" effect. These have been burst tested by an independent test house and have been proven to have comparable strength to Perlon.

What this means is that unlike other fabric finishes, the inner or outer double Perlon on a prosthetic socket can be replaced with a double Sparkle layer which adds no weight, no extra thickness and the manufacturing process remains the same. These are an excellent addition to other available finishes that we offer which are easy to use and cost effective.

Decorative Lycra® Tubes & Fabric

These are Lycra Tubes that have been sewn into 15cm and 20cm widths, they are also available in flat fabric. They are designed to be used as a decorative finishing layer for prosthetic sockets and are used as the final layer before clear resin is poured. They can also be used in silicone liners, orthotic devices or as a cosmetic cover over a cosmesis or a plaster cast.

Matching Transfer Papers

In many cases we can offer Lycra designs to match our range of transfer papers. Please contact us with your requirements.

Custom Designs

As well as being able to offer many other designs we can also offer bespoke designs. We have customers who have their company logo made into designs which they use as the first layer in a lamination so their logos are visible on the inside of the device. Please contact us with your requirements.

LimbTex Thermoplastics for O & P

We have many different plastic materials available, all with their own characteristics which lend themselves to different applications. Below briefly explains which each material is used for, but if you require more help and advice, please call us to discuss this, also if we don't list something, it doesn't mean we can't get it, just ask and we will try to help.

LimbCpoly:

This is an extruded Copolymer Polypropylene and can be used for the manufacture of prosthetic and orthotic devices. It is available in natural, white and black colours. Most thicknesses are available in full or cut sheets.

Uses: AFO's, KAFO's, FFO's, Body Jackets, Prosthetic Sockets, Night Splints etc

LimbHpoly:

This is an extruded Homopolymer Polypropylene and can be used for the manufacture of prosthetic and orthotic devices. It is available in natural colour only. Most thicknesses are available in full or cut sheets.

Uses: AFO's, KAFO's, DAFO's, Prosthetic Sockets etc

LimbMHpoly:

This is an extruded, modified Homopolymer Polypropylene. It is more resilient than the standard grade at lower temperatures, less brittle and less notch sensitive. It was designed for the manufacture of orthotic devices. It is available in natural colour only. Limited thicknesses are available, supplied in full or cut sheets.

Uses: AFO's, KAFO's, DAFO's etc

LimbHpoly PP:

This is a pressed and planed Homopolymer Polypropylene and can be used for the manufacture of foot orthotic devices. It is available in natural, black or beige colour only. Most thicknesses are available in full or cut sheets.

This material is more stable than extruded sheet when being milled.

Uses: FFO's etc

LimbPE:

This is an extruded Low Density Polyethylene and can be used for the manufacture of prosthetic and orthotic devices. It is available in natural colour only. Most thicknesses are available in full or cut sheets.

Uses: Night splints, Body jackets, Prosthetic socket liners etc

LimbPlex:

This is an extruded PETG and is very strong. It's transparent making it ideal for diagnostic / check sockets for both prosthetic and orthotic devices. It is available in transparent only. Most thicknesses are available in full or cut sheets.

Uses: Diagnostic / check sockets etc

LimbPlasStiff:

This is an extruded, Styrene based material and is very strong. It's clear making it ideal for diagnostic / check sockets for prosthetic devices. This material will not crack and is virtually in destructible. Better for prolonged walking trials than PETG. It is available in clear, prosthetic sized squares only.

Uses: Diagnostic / check sockets etc

LimbFlex300:

This is an extruded, EVA based material which is non-sticky and semi-transparent. The flexibility of this material is inbetween Limbplas Soft and LimbPE making it suitable for the heavier wearer as a prosthetic liner. It is available in semi-transparent, prosthetic size squares only.

Uses: Prosthetic flexible liners

LimbPlasSoft:

This is an extruded, EVA based material which is non-sticky and semi-transparent. This is our most commonly used prosthetic liner material. It is available in semi-transparent, prosthetic size squares only.

Uses: Prosthetic flexible liners

LimbPlas Soft White:

This is an extruded, EVA and Silicone based material which is non-sticky and an opaque white colour. The silicone gives this material a very smooth finish and feel. It is available in white, prosthetic sized squares only.

Uses: Prosthetic flexible liners

LimbPlas Soft Black:

This is an extruded, Polyethylene copolymer based material. It weighs approximately 7% less than Eva based material and is available in black, prosthetic sized squares only.

Uses: Prosthetic flexible liners

LimbPlas Super Soft:

This is an extruded, Polyethylene copolymer based material. It weighs approximately 7% less than Eva based material which doesn't yellow. It is available in semi-transparent, prosthetic sized squares and sheets for orthotic devices.

Uses: Prosthetic flexible liners, Body Jackets, Wrist Splints etc

Prosthetic Thermoplastics

LimbFlex300 - Soft inner socket opaque material. Firmer than LimbPlas Soft.

Cooking Temperature: 165°C (329°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBFLEX30010	10 mm	400 x 400mm	1 Sq
LIMBFLEX30012	12 mm	400 x 400mm	1 Sq
LIMBFLEX30015	15 mm	400 x 400mm	1 Sq

Prosthetic Thermoplastics

LimbPlas Soft - Soft, clear inner socket material
Cooking Temperature: 150°C (302°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS9SOFT	9 mm	400 x 400mm	1 Sq
LIMBPLAS12SOFT	12 mm	400 x 400mm	1 Sq

LimbPlas Soft White - Soft white inner socket material, the same as our soft but white in colour.
Cooking Temperature: 150°C (302°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS9SOFTW	9 mm	400 x 400mm	1 Sq
LIMBPLAS12SOFTW	12 mm	400 x 400mm	1 Sq

LimbPlas Soft Black - Soft black socket material.

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS8SOFTBLK	8mm	400 x 400	1 Sq
LIMBPLAS10SOFTBLK	10mm	400 x 400	1 Sq
LIMBPLAS12SOFTBLK	12mm	400 x 400	1 Sq
LIMBPLAS15SOFTBLK	15mm	400 x 400	1 Sq

LimbPlas Super Soft - Super soft inner socket material, more flexible than our soft material
Cooking Temperature: 150°C (302°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS8SSOFT	8 mm	400 x 400mm	1 Sq
LIMBPLAS10SSOFT	10 mm	400 x 400mm	1 Sq
LIMBPLAS12SSOFT	12 mm	400 x 400mm	1 Sq
LIMBPLAS15SSOFT	15 mm	400 x 400mm	1 Sq

Prosthetic Thermoplastics

LimbPE Polyethylene Squares

Use: Low Density Polyethylene used for inner liners & for holding shuttle locks. It is more flexible than Copolymer Polypropylene

Cooking Temperature: 150°C (302°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPE3436	6 mm	343 x 343mm	1 Sq
LIMBPE3439	9 mm	343 x 343mm	1 Sq
LIMBPE4066	6 mm	406 x 406mm	1 Sq
LIMBPE4069	9 mm	406 x 406mm	1 Sq

LimbPlas Diagnostic Thermoplastics

LimbPlex - PETG Diagnostic Socket Material

Full sheets available on request, please call for information

Cooking Temperature: **Orthotics** 120°C (248°F) **Prosthetics** 160°C (320°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPLEX3433	3mm	343 x 343mm	1 Sq
LIMBPLEX3435	5mm	343 x 343mm	1 Sq
LIMBPLEX3436	6mm	343 x 343mm	1 Sq
LIMBPLEX3438	8mm	343 x 343mm	1 Sq
LIMBPLEX34310	10mm	343 x 343mm	1 Sq
LIMBPLEX34312	12mm	343 x 343mm	1 Sq
LIMBPLEX34315	15mm	343 x 343mm	1 Sq
LIMBPLEX4063	3mm	406 x 406mm	1 Sq
LIMBPLEX4065	5mm	406 x 406mm	1 Sq
LIMBPLEX4066	6mm	406 x 406mm	1 Sq
LIMBPLEX4068	8mm	406 x 406mm	1 Sq
LIMBPLEX40610	10mm	406 x 406mm	1 Sq
LIMBPLEX40612	12mm	406 x 406mm	1 Sq
LIMBPLEX40615	15mm	406 x 406mm	1 Sq
LIMBPLEX420X46012	12mm	420 x 460mm	1 Panel
LIMBPLEX420X46015	15mm	420 x 460mm	1 Panel

LimbPlasStiff - Rigid Diagnostic Material which can be bolted to adapters etc without the worry of it fracturing for dynamic trials.

Cooking Temperature: 170°C (338°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBPLAS8STIFF	8 mm	400 x 400mm	1 Sq
LIMBPLAS10STIFF	10 mm	400 x 400mm	1 Sq
LIMBPLAS12STIFF	12 mm	400 x 400mm	1 Sq
LIMBPLAS15STIFF	15 mm	400 x 400mm	1 Sq

Prosthetic Thermoplastics

LimbHPoly - Homopolymer Polypropylene Squares for Prosthetics

Homopolymer Polypropylene

Use: where a more rigid socket is required.

Cooking Temperature: 200 - 220°C (329° - 392°F)

Product Code	Thickness	Sheet Size	Quantity
LIMBHPOLY34312	12 mm	343 x 343mm	1 Sq
LIMBHPOLY34315	15 mm	343 x 343mm	1 Sq
LIMBHPOLY40612	12 mm	406 x 406mm	1 Sq
LIMBHPOLY40615	15mm	406 x 406mm	1 Sq

LimbCPoly - Copolymer Polypropylene squares

Use for Prosthetics: has very good flexueral strength

Cooking Temp 200°C - 225°C

CoPolymer Product Code	Colour	Thickness	Size	Quantity
LIMBCPOLY34336	Natural	6mm	343 x 343mm	1 Sq
LIMBCPOLY4066	Natural	6mm	406 x 406mm	1 Sq
LIMBCPOLY34339	Natural	9mm	343 x 343mm	1 Sq
LIMBCPOLY4069	Natural	9mm	406 x 406mm	1 Sq
LIMBCPOLY30512	Natural	12mm	305 x 305mm	1 Sq
LIMBCPOLY34312	Natural	12mm	343 x 343mm	1 Sq
LIMBCPOLY40612	Natural	12mm	406 x 406mm	1 Sq
LIMBCPOLY420X46012	Natural	12mm	420 x 460mm	1 Panel
LIMBCPOLY34315	Natural	15mm	343 x 343mm	1 Sq
LIMBCPOLY40615	Natural	15mm	406 x 406mm	1 Sq
LIMBCPOLY420X46015	Natural	15mm	420 x 460mm	1 Panel
LIMBCPOLY3439B	Black	9mm	343 x 343mm	1 Sq
LIMBCPOLY4069B	Black	9mm	406 x 406mm	1 Sq
LIMBCPOLY34312B	Black	12mm	343 x 343mm	1 Sq
LIMBCPOLY40612B	Black	12mm	406 x 406mm	1 Sq

Orthotic Thermoplastics

All materials can be cut into panel sizes to suit your requirements, please contact us for more details.

LimbCpoly Copolymer Polypropylene Sheet for Orthotics

Copolymer Polypropylene

Cooking Temperature: 180 - 200°C (356° - 392°F)

N.B. Supplied in half sheets. Please call if full sheets are required.

CoPolymer Product Code	Colour	Thickness	Full Sheet Size	Quantity
LIMBCPOLY2	Natural	2mm	2440 x 1220mm	1 Sheet
LIMBCPOLY3	Natural	3mm	2440 x 1220mm	1 Sheet
LIMBCPOLY3.5	Natural	3.5mm	2440 x 1220mm	1 Sheet
LIMBCPOLY4.5	Natural	4.5mm	2440 x 1220mm	1 Sheet
LIMBCPOLY6	Natural	6mm	2440 x 1220mm	1 Sheet
LIMBCPOLY9	Natural	9mm	2440 x 1220mm	1 Sheet
LIMBCPOLY12	Natural	12mm	2440 x 1220mm	1 Sheet
LIMBCPOLY15	Natural	15mm	2440 x 1220mm	1 Sheet
LIMBCPOLY3W	White	3mm	2440 x 1220mm	1 Sheet
LIMBCPOLY4.5W	White	4.5mm	2440 x 1220mm	1 Sheet
LIMBCPOLY6W	White	6mm	2440 x 1220mm	1 Sheet
LIMBCPOLY3B	Black	3mm	2440 x 1220mm	1 Sheet
LIMBCPOLY4.5B	Black	4.5mm	2440 x 1220mm	1 Sheet
LIMBCPOLY6B	Black	6mm	2440 x 1220mm	1 Sheet
LIMBCPOLY9B	Black	9mm	2440 x 1220mm	1 Sheet
LIMBCPOLY12B	Black	12mm	2440 x 1220mm	1 Sheet

Orthotic Thermoplastics

LimbHpoly Homopolymer Polypropylene Sheet for Orthotics

Use: for thin wall, high stiffness devices.

Cooking Temperature: 180° - 220°C (356° - 392°F)

N.B. Supplied in half sheets. Please call if full sheets are required.

HomoPolymer Product Code	Colour	Thickness	Full Sheet Size	Quantity
LIMBHPOLY2	Natural	2 mm	2000 x 1000mm	1 Sheet
LIMBHPOLY3	Natural	3 mm	2440 x 1220mm	1 Sheet
LIMBHPOLY4	Natural	4 mm	2440 x 1220mm	1 Sheet
LIMBHPOLY5	Natural	5 mm	2440 x 1220mm	1 Sheet
LIMBHPOLY6	Natural	6 mm	2440 x 1220mm	1 Sheet
LIMBHPOLY12	Natural	12 mm	2440 x 1220mm	1 Sheet
LIMBHPOLY15	Natural	15 mm	2440 x 1220mm	1 Sheet

LimbHpoly Modified Homopolymer Polypropylene Sheet for Orthotics

- Temperature range 0 - 100°C, performs better at low temperatures than standard Homopolymer Polypropylene's
- Not as brittle as other Homopolymers
- Developed primarily for manufacturing Orthoses

Cooking Temperature: 180° - 220°C (356° - 392°F)

N.B. Supplied in half sheets. Please call if full sheets are required.

Modified Homopolymer Product Code	Colour	Thickness	Full Sheet Size	Quantity
LIMBMHPOLY3	Natural	3 mm	2000 x 1000mm	1 Sheet
LIMBMHPOLY4	Natural	4 mm	2000 x 1000mm	1 Sheet
LIMBMHPOLY5	Natural	5 mm	2000 x 1000mm	1 Sheet

LimbPE Low Density Polyethylene for Orthotics

Low Density Polyethylene

Cooking Temperature: 150°C (302°F)

Product Code	Colour	Thickness	Sheet Size	Quantity
LIMBPE1.5	Natural	1.5 mm	2440 x 1220mm	1 Sheet
LIMBPE3	Natural	3 mm	2000 x 1000mm	1 Sheet
LIMBPE4	Natural	4 mm	2000 x 1000mm	1 Sheet
LIMBPE5	Natural	5 mm	2000 x 1000mm	1 Sheet
LIMBPE6	Natural	6 mm	2440 x 1220mm	1 Sheet

LimbPlas Super Soft for Orthotics

Use: Soft flexible, transparent material for liners, body jackets, hand splints etc.

Cooking Temperature: 130°C (226°F)

Modified Homopolymer Product Code	Colour	Thickness	Sheet Size	Quantity
LIMBPLAS3SSOFT	Natural	3 mm	1225 x 1225mm	1 Sheet
LIMBPLAS4SSOFT	Natural	4 mm	1225 x 1225mm	1 Sheet
LIMBPLAS5SSOFT	Natural	5 mm	1225 x 1225mm	1 Sheet

Orthotic Thermoplastics

LimbPlex - PETG
Diagnostic sheet for orthotic devices, cut panels are available.

Larger 3050 x 2050mm sheets are also available on request.

Cooking Temperature: 120°C

Product Code	Thickness	Sheet Size	Quantity
LIMBPLEX3	3mm	2050 x 1250mm*	1 Sheet
LIMBPLEX5	5mm	2050 x 1250mm*	1 Sheet
LIMBPLEX6	6mm	2050 x 1250mm*	1 Sheet

* Unless otherwise requested, these sheets will be cut into half for transportation

Basalt Composite Thermoplastic Plates

These plates are made from quality Basalt fibres with multi and uni-directional layers which are bonded together using PLA (Polylactic acid). This material can be used for shoe inserts to stiffen the sole where thermoforming isn't required but they can also be heated for moulding insoles etc. These plates mold very well with characteristics similar to copolymer polypropylene. This material fits in with our **earth collection** range as the PLA resin is biodegradable because it is made from corn starch or sugar cane.

Only full sheets are listed below, but we are able to offer a cutting service if required, please contact us.

Product Code	Thickness	Sheet Size	Quantity
BASTHERMO/1.8	1.8mm	1000 X 1000mm	1 Sheet
BASTHERMO/2.6	2.6mm	1000 x 1000mm	1 Sheet
BASTHERMO/3.2	3.2mm	1000 x 1000mm	1 Sheet

ORTHOTIC Straps

- Very Strong
- Can be trimmed without fraying
- Wipeable
- 9 Colours
- 4 Widths
- Sold as kits or individual items
- Cost effective
- Can be ordered with a printed design (MOQ would apply)

These exclusive straps are made from reinforced PVC with hook and loop high frequency welded together making them an extremely strong and durable option. Nine colours in 4 widths cover most requirements and give a modern professional finish.

Colour Codes:		
BGRN =Bright Green, BLK = Black, BLU = Blue, BPK = Bright Pink, CF = Carbon Fibre, RED = Red, SKIN = Skin, WHT = White, YEL = Yellow		
KIT CODE (Insert required colour code) e.g. SK/BGRN/20	STRAP SIZE (Trimable) W x L	DESCRIPTION (Insert colour required into description) e.g. Strap Kit 20mm ¾" Bright Green x 1
SK___/20	20 x 300mm	Strap Kit 20mm - ¾" _____ x1
SK___/25	25 x 500mm	Strap Kit 25mm - 1" _____ x1
SK___/38	38 x 500mm	Strap Kit 38mm - 1 ½" _____ x1
SK___/50	50 x 500mm	Strap Kit 50mm - 2" _____ x1
INDIVIDUAL STRAP CODES (Insert required colour code) e.g. STPPVCBGRN/0.75	STRAP SIZE (Trimable) W x L	DESCRIPTION (Insert colour required into description) e.g. Strap, ¾" x 12" (20 x 300mm) Bright Green PVC x1
STPPVC___/0.75	20 x 300mm	Strap, ¾" x 12" (20 x 300mm) _____ x1
STPPVC___/1	25 x 500mm	Strap, 1" x 20" (25 x 500mm) _____ x1
STPPVC___/1.5	38 x 500mm	Strap, 1.5" x 16" (38 x 500mm) _____ x1
STPPVC___/2	50 x 500mm	Strap, 2" x 20" (50 x 500mm) _____ x1
INDIVIDUAL PAD CODES (Insert required colour code) e.g. SPADPVCBGRN/M	STRAP SIZE (Trimable) W x L	DESCRIPTION (Insert colour required into description) e.g. Strap Kit 20mm ¾" Bright Green x 1
SPADPVC___/S	30 x 65mm	Pad S to fit 20mm Strap _____ x1
SPADPVC___/M	50 x 140mm	Pad M to fit 25mm Strap _____ x1
SPADPVC___/L	64 x 140mm	Pad L to fit 38mm Strap _____ x1
SPADPVC___/XL	74 x 140mm	Pad XL to fit 50mm Strap _____ x1
INDIVIDUAL CHAFE CODES (Insert required colour code) e.g. SCHPVCBGRN/0.75	CHAFFE SIZE (Trimable) W x L	DESCRIPTION (Insert colour required into description) e.g. Chafe, ¾" (20mm) Bright Green PVC with SS Loop x1
SCHPVC___/0.75	20 x 45mm	Chafe, ¾" (20mm) _____ PVC with SS Loop x1
SCHPVC___/1	25 x 50mm	Chafe, 1" (25mm) _____ PVC with SS Loop x1
SCHPVC___/1.5	38 x 53mm	Chafe, 1.5" (38mm) _____ PVC with SS Loop x1
SCHPVC___/2	50 x 53mm	Chafe, 2" (50mm) _____ PVC with SS Loop x1

Bespoke Straps

Our straps can be ordered with any of our transfer paper designs digitally printed on to them to completely coordinate your device MOQ would apply, but these can be spread over the 4 different widths of straps, pads and chafes. Please contact us if this is of interest to you.

We print transfer papers

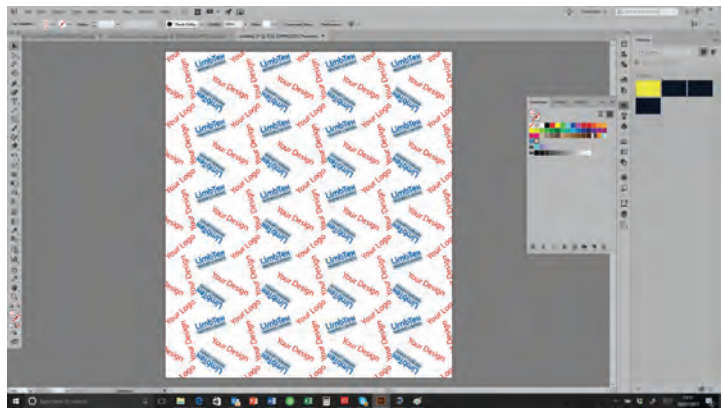

Bespoke Transfers

Ever thought how good it would be to have your own range of transfer papers and stand out from the crowd? We can help and modify the designs that we already have in the following ways - colours, backgrounds, angles, scale etc or we can offer a completely new design along the lines that you are looking for.

If you don't want to invest in a 10m roll of the same patterns in our standard range, we can print multiple designs on the same roll.

We can also link these designs to our Lycra® fabric range as we can print the transfer designs on to this too.

Set up charges are low and so is the MOQ. Please contact us with your requirements

LimbTex Manufacturing Stockings, Stockinette & Ribbed Stockinette

Stocking Use: These fine mesh stockings and stockinette are used over casts etc to act as a wick to remove the air when vacuuming thermoplastics and foams etc. They give a smooth finish to the inside of the plastic. Long white for KAFO's etc and Short white for AFO's etc. Black stockings are used as an outer layer for black sockets when using black pigment to give a "true" black finish or under a carbon fibre braid finish to cover any white showing through. Ribbed Cotton & Cotton Stockinette is used as a wick under thermoplastics where surface finish isn't too important.

Other sizes / colours available on request

Product Code	Description	Denier	Length	Quantity
SSW20	Stockings Short White	20	0.5m	Bag/100
SLW20	Stockings Long White	20	1.2m	Bag/50

RIBBED30	Ribbed Stockinette 30cm wide	25m	1 Roll
COTTON10	Cotton Stockinette 10cm bleached	10m	1 Roll
COTTON15	Cotton Stockinette 10cm bleached	10m	1 Roll

Continuous 20 Denier Stocking to fit over Spinal Casts

- and other large items that require a larger stockinette.

Product Code	Description
SCT20	Stockinette Continuous Torso 20 Denier, 250g

Elastic Compression Stockinette for Sprains etc

Use: Sprains etc but also for reinforcing cosmetic foams.

Product Code	Description	Quantity
ESD7.5	Elastic Stockinette Size D, 7.5cm x 10m	1 Roll
ESE8.75	Elastic Stockinette Size E, 8.75cm x 10m	1 Roll
ESF10	Elastic Stockinette Size F, 10cm x 10m	1 Roll
ESJ17	Elastic Stockinette Size J, 17.5cm x 10m	1 Roll
ESL32	Elastic Stockinette Size L, 32.5cm x 10m	1 Roll

LimbTex Latex Cones

Latex Cone Use: These are used over a plaster cast or PU foam to isolate them and give a smooth finish inside a thermoplastic socket or laminated socket

Product Code	Approximate Diameter at Open End	Approximate Length	Quantity
LCS	20cm	57cm	PK/10
LCM	25cm	57cm	PK/10
LCL	30cm	57cm	PK/10

LimbTex Draping Frames and Spares

Use: Specially developed for holding prosthetic thermoplastic squares.

Product Code	Description	Will Accept Plastic Size	Quantity
DRAPEF343	Drape Frame 343 ² mm	335 - 350mm ²	1
DRAPEF400	Drape Frame 400 ² mm	395 - 410mm ²	1

LD45PZ6WHT	White	6mm	45Kg/m ³	1500 x 1000mm	1 Sheet
LD45PZ12WHT	White	12mm	45Kg/m ³	1500 x 1000mm	1 Sheet
LD45PZ27WHT	White	27mm	45Kg/m ³	1500 x 1000mm	1 Sheet
LD45PZ3YEL	Yellow	3mm	45Kg/m ³	2000 x 1000mm	1 Sheet

Plastazote LD70 Foams

Use: Firm build ups on liners & general padding.

Product Code	Colour	Thickness	Density	Sheet Size	Qty
LD70PZ12WHT	White	12mm	70Kg/m ³	1700 x 850 mm	1 Sheet
LD70PZ25WHT	White	25mm	70Kg/m ³	1700 x 850 mm	1 Sheet

Plastazote HD115 Foams

Use: Shoe raises etc - very light weight.

Product Code	Colour	Thickness	Density	Sheet Size	Qty
HD115PZ3BLK	Black	3mm	115Kg/m ³	860 x 640mm	1 Sheet
HD115PZ6BLK	Black	6mm	115Kg/m ³	860 x 640mm	1 Sheet
HD115PZ12BLK	Black	12mm	115Kg/m ³	860 x 640mm	1 Sheet
HD115PZ18BLK	Black	18mm	115Kg/m ³	860 x 640mm	1 Sheet

Evazote EV50 Foams - Contains EVA so has a better memory than LD45

Use: Seat pads, general padding

Product Code	Colour	Thickness	Density	Sheet Size	Qty
EV50BLK6	Black	6mm	50Kg/m ³	1700 x 850mm	1 Sheet
EV50BLK12	Black	12mm	50Kg/m ³	1700 x 850mm	1 Sheet
EV50BLK25	Black	25mm	50Kg/m ³	1700 x 850mm	1 Sheet
EV50WHT6	White	6mm	50Kg/m ³	1700 x 850mm	1 Sheet
EV50WHT12	White	12mm	50Kg/m ³	1700 x 850mm	1 Sheet
EV50WHT25	White	25mm	50Kg/m ³	1700 x 850mm	1 Sheet

EVA Foams

These have many uses as they are extremely durable, have fine cell structures and are easy to machine

EVA Water Colour Foam Sheet

Use: Top Covers, linings, etc.

Product Code	Colour	Thickness	Shore A	Sheet Size	Quantity
EVAWCA30BE1	Beige	1mm	30	1050 x 1050mm	1 Sheet
EVAWCA30BLK1	Black	1mm	30	1050 x 1050mm	1 Sheet

Contact Adhesives

Contact O & P

This is a Toluene free, contact adhesive ideally suited to the Orthotics and Prosthetics field. It has a good bond strength and works well at varied temperatures and on varied substrates.

Use: It can be used to bond, PE Foams, EVA foams, Rubber, Plastics, Leathers, Polyurethanes, Cork, Wood, as well as many other materials

Product Code	Description	Size
CONTACT/0.5	Contact O & P Adhesive	500ml can
CONTACT/1	Contact O & P Adhesive	1Ltr can
CONTACT/5	Contact O & P Adhesive	5Ltr can

ConSolvTF

This is Toluene free liquid, thinner/solvent/cleaner for Contact adhesives

Use: Dissolving contact adhesives and cleaning tools. Also Ideal for removing sole units etc

Product Code	Description	Size
CONSOLVTF/0.5	Contact Adhesive, Toluene free Cleaner/Thinner	500ml can
CONSOLVTF/1	Contact Adhesive, Toluene free Cleaner/Thinner	1Ltr can

THIXOFIX	Thixofix Contact Adhesive	1 Ltr

Evo-Stik® 528 Contact Adhesive

Use: Gluing LimbFoam liners and general use.

Product Code	Description	Quantity
EVOSTIK528/0.5	EVO-STIK 528, 500ML	1
EVOSTIK528/1	EVCO-STIK 528, 1LTR	1

Adhesive Containers

Glue Pot - for use with contact adhesives only.

Product Code	Description	Quantity
GP/0.9	Glue Pot 0.9L with Brush	1
GP/1.5	Glue Pot 1.5L with Brush	1

+PLUSeries® Adhesives

These adhesives are versatile and fast two-part urethane systems for bonding and repairing plastics, composites, aluminium, steel, plaster and nearly anything you can think of commonly used in the O & P manufacturing process. As these are structural adhesives, they are significantly stronger and less brittle than other products commonly used in the industry today. They have fine cell structures and are easy to machine

Product Code	Description	Size
PLUS25/50	+PLUSeries® 25 Second Tan	50ml
PLUS60/50	+PLUSeries® 60 Second Tan	50ml
PLUS60/220	+PLUSeries® 60 Second Tan	220ml
PLUSC1/50	+PLUSeries® 60 Second Composite, Black,	50ml
PLUSC1/220	+PLUSeries® 60 Second Composite, Black	220ml

+PLUSeries® 25 Second Adhesive

+PLUSeries® 25 Second Adhesive is the fastest curing 2-component urethane known to be on the market. This urethane product is so fast it can often replace Cyanoacrylate "Tacking" adhesives.

FEATURES:

- Tan colour
- High-Strength
- Structural Adhesive
- Resistant to elevated temperatures, moisture, most solvents and chemicals
- 25 second working time
- 50ml cartridges

+PLUSeries® 60 Second Adhesive

This tan coloured 60 second adhesive is the most popular adhesive and has a fast 60 second working time. Can easily be sanded and smoothed with abrasives.

FEATURES:

- Tan colour
- High-Strength
- Structural Adhesive
- Resistant to elevated temperatures, moisture, most solvents and chemicals
- 60 second working time
- 50ml and 220ml cartridges

+PLUSeries® Composite Adhesive

This is a two-part black pigmented urethane adhesive designed for structural bonding of today's high performance composite sockets and bracing systems used in O&P. It has a working time of 60 seconds and provides high strength and fatigue endurance as well as superior toughness.

FEATURES:

- Black colour – Perfect for carbon fibre devices
- High-Strength
- Structural Adhesive
- Resistant to elevated temperatures, moisture, most solvents and chemicals
- 60 second working time
- 50ml and 220ml cartridges

Dual Cartridge Adhesive Accessories

Static Mixer Nozzles for 50ml and 220ml cartridges

LimbCryl Lacquer & Lacquer Thinner

Use: For isolating damp plaster casts and to add a gloss coat to sanded lamination surfaces, Thinner used to dilute the lacquer

Product Code	Description	Quantity
LAC	Laquer	1 Ltr
LACT	Laquer Thinner	1 Ltr

Acetone

Use: Acetone 99.9 % pure and is a solvent that can be used for many applications in a workshop, ideally suited to cleaning resin from tools, dissolving two - part epoxies, superglue etc. Can also be used as a degreaser and general cleaning

Product Code	Quantity
ACET	5 Ltr

Cellulose Thinners

Use: General purpose thinner for use with a wide range of cellulose base coats and lacquers. Use for paint thinning and cleaning tools and equipment. Also excellent for removing wax build-up on GRP moulds

Product Code	Quantity
CT/5	5 Ltr

NeoSolv

This is a thinner/solvent/cleaner for Neoprene adhesives.

Use: Dissolving contact adhesives and cleaning tools. Also Ideal for removing sole units etc

Product Code	Description	Size
NEOSOLV/0.5	Neoprene Cement	500ml can
NEOSOLV/1	Neoprene Cement	1Ltr can
NEOSOLV/5	Neoprene Cement	5Ltr can

Degreaser

Use: General purpose cleaner & degreaser with spray nozzle.

Prosthetic & Orthotic Cad Cam PU Foam Blanks

With Cad Cam technology advancing in prosthetics and orthotics, it is necessary to advance with your materials. LimbTex Prosthetic Cad Cam blocks are manufactured in individual moulds using a high pressure mixed polyurethane foam which is dosed exactly to give consistent, high quality carving foam. Our blocks are anti-static to help reduce foam build up on your carver. The foam carves cleanly and provides a smooth surface although depending on the application and customer requirements this can be modified. As most of our blocks are tapered, this saves time and produces less waste during the carving process. It also reduces the cost of the blocks as less material is used to manufacture them.

3D Lining Textile/Foam

This is a 3 layer material which consists of spacer fabric, open cell foam and a velour backing. The spacer fabric and foam allow air to circulate and helps reduce perspiration whilst the velour helps attaching it to orthopaedic braces etc.

Uses: Lining Orthopaedic seats, braces etc

LimbTex Under Stockings

Under Stocking Use: These under stockings can be used under the cosmetic stocking to lighten or darken the tone, they also save money as they are more cost effective than putting 2 x cosmetic stockings on the limb, the second can be given to the patient as a spare. Black used under carbon fibre to cover any white materials

SLBLK20	1.2m	Black	Bag/50

Liquid Cosmesis

This product is designed to be used on Trans-Tibial prostheses to produce a custom foam cover, it can also be used in other areas that may also require a soft flexible foam. The endo-skeletal prosthesis is wrapped in Clingfilm and suitably sized polyethylene shells are positioned and also wrapped in Clingfilm to hold them together and in place. If possible, there should be a 5mm gap between the socket and the shells to allow the liquid foam to expand. Once this

is done, weigh out the 2 components in a fume cupboard using a ratio of 100 parts foam to 60 parts hardener. Typically an average sized cosmesis will need 200 parts foam to 120 parts hardener. If required, pigment can be added up to 2% before mixing all components together for 20-30 seconds with a drill and mixing attachment. Once mixed, pour the mixture in the side hole of the shells and then tape up the hole (this is to prevent air being trapped which could happen if the mixture was poured in from the top). Stand the prosthesis upright in the fume cupboard or well ventilated area. Leave for 15-45 minutes before removing the shells. The length of time will depend on the room temperature and whether or not pigment has been added. After 90 minutes it can be removed from the prosthesis by cutting it down the posterior with a sharp knife. The Clingfilm can then be removed and the foam cosmesis glued back in position, trimmed and sanded with hand and machine abrasives.

Sheaths, Plain & Terry Upper & Lower Limb Prosthetic Socks

LimbWear Cotton Prosthetic socks are made from the highest quality yarns and all benefit from our "Non-restrictive cuff". Although non-restrictive, the cuff design and the use of Lycra® ensures that they retain their shape and fit perfectly.

Our socks are manufactured on state of the art machinery and do not have any inner seams that may cause discomfort.

As these are class 1 medical products all the materials used conform to the Öko-Tex Standard 100, so meet all necessary requirements. The cotton we use is very soft to give the softest feel possible to our finished products and comfort to the user.

As pin-locking systems for silicone liners are very common, we offer a reinforced distal hole across the whole cotton range.

All of our socks are pre-shrunk, so the size you order retains its size wash after wash.

Our sheer Nylon sheaths are ideal to use as donning aids or directly against the skin to add to the comfort of the user.

If you have particular requirements for other yarns, treatments, sizes etc, please contact us as we are able to custom manufacture including your logo's etc.

Our Sheaths & Socks

Every style of sock and sheath is available in a variety of lengths to suit all users and we can manufacture socks to your specifications if required (min orders will apply). Each sock and sheath is packaged individually and can be ordered individually

Our plain knit and terry socks are available in five widths...

Nylon Sheaths

Thinnest sock/sheath we offer

Nylon Sheaths are manufactured from fine nylon yarn that offers comfort if worn against the skin or over the liner. The open mesh design allows airflow keeping the residual limb comfortable. These sheaths can also be used for donning prosthetic limbs.

Over Sheath - for use over Locking Pin Liners

Plain Knit Prosthetic Socks

Middle thickness sock we offer

Plain knit provides a comfortable, breathable, cushioning interface between the residual limb and the prosthetic limb socket.

Terry Towelling Knit Prosthetic Socks

Thickest sock we offer

Terry Towelling knit provides an very comfortable, breathable cushioning interface between the residual limb and the prosthetic limb socket.

Coloured Socks

BLACK

FLESH

Bi Thickness Sock

Bi Thickness Socks are designed for the Trans-Tibial wearer and are constructed with either Plain knit at the top and Terry knit at the bottom or Terry knit at the top and Plain knit at the bottom. They are used to compensate for volume increase or reduction at the proximal or distal end of the residual limb. This is a much better option than the old fashioned way of using a spare sock cut in half or the more time consuming half leather lining.

Socks with a Locking Pin hole

Available in Plain and Terry knit

A variety of our socks are designed to be used with a Locking Pin Liner so have a reinforced hole in the distal end of the sock for the pin to pass through. These socks are to help with residual limb volume fluctuation or to extend the life of a prosthetic socket if it becomes too loose. The hole is sewn in a specific way so that it reinforces the fibres and prevents the yarns from fraying which could cause problems by fouling the Pin Lock etc.

LimbWear Nylon Sheaths

Manufactured in 100% Nylon with non-restrictive cuff

Notes:

Wool Trans-Tibial Terry Knit Socks

Merino wool is highly breathable because its individual fibers can absorb up to 30% of their own weight in moisture, wicking moisture away from the body so the wearer stays dry and comfortable regardless of the temperature. This helps to regulate the body temperature, keeping you warm in cold weather and cool in hot. Merino wool fibres also provide a natural antibacterial effect so reduce odours, also being the softest of all wool types, is often also suitable for allergic skin as it generally does not cause allergic reactions.

TTTW40	Trans-Tibial Terry Knit Wool Sock 40cm Long	16	55

Cotton Suction Liner Sock

These socks are made in Plain and Terry knit Cotton fabric and are designed to combat volume fluctuation problems on the proximal side of silicone or gel suction liner veins.

They are open ended and designed with a tighter band one end to fit snugly into the groove above the silicone/gel veins to secure it in position.

Product Code	Description	Quantity
LINERSOC30P	Cotton Suction Liner Sock Plain Knit 30cm Long	1
LINERSOC40P	Cotton Suction Liner Sock Plain Knit 40cm Long	1
LINERSOC30T	Cotton Suction Liner Sock Terry Knit 30cm Long	1
LINERSOC40T	Cotton Suction Liner Sock Terry Knit 40cm Long	1

Nylon Mitt

These are made from 100% Nylon and can be used over small liners to aid donning or laminated inside upper limb cup sockets for a smooth finish.

Donning Spray

This is used to aid the donning of silicone and gel liners. When applied to the outer surface of the materials they can glide over themselves with little effort. The lubricant can be wiped off after or left to evaporate naturally in a short time. Available in a large or small bottle.

Contains: 70% Isopropranol and 30% Water

DS/100	Donning Spray 100ml	1
DS/500	Donning Spray 500ml	1

Caring for LimbWear Cotton Prosthetic Socks

For our Cotton prosthetic socks to remain comfortable and perform as they should, they will need to be cared for.

Please follow these guidelines to get the most use out of them:

- Use a clean sock every day.
- Avoid creases.
- Do not mend your socks, if socks become uncomfortably thin, hard or have holes in you should discard them and use new ones.
- Our socks are machine washable but using fabric conditioners may cause skin irritation so try to avoid this.
- Wash the socks inside out and tumble dry as this help will return them back to original condition.
- Washing instructions are on each pack.

Caring for LimbWear Merino Wool Prosthetic Socks

Wool is often considered to be a high maintenance fabric that needs to be hand washed, which is not always the case. Merino wool is in fact quite easy to take care of and as it is naturally antibacterial it prevents odours so require less washing than cotton or synthetics. Merino wool is also highly resistant to stains.

- Machine wash on a low to medium heat (30 degrees) on a cold cycle or use a wool wash/delicates option if available.
- Wash inside out as this will prevent bobbling.
- Wash separately where possible. If not, then wash with 'harder' garments, such as denim, which will reduce piling.
- Use a mild detergent. If using a powdered detergent, you may wish to dissolve it in a little water first to prevent large flecks of the detergent settling on the fabric which can stick or cause holes.
- Don't not use fabric softeners because these will coat the merino fibres limiting the wool's natural ability to actively managing your moisture and body temperature. Softeners can also encourage bobbling by helping the fibres move to the surface easier.
- Tumble dry on a low heat or dry lying flat.
- Don't dry on or near heat or in direct sunlight as the heat may cause shrinkage.
- Don't dry clean or use bleach. A lot of bleaches will use chlorine which can destroy the merino fibres.
- Don't wring out the sock as this will stretch the wool.
